CS423 / CSC13003 – Software Testing (AI-augmented · 2026)

AI POLICY · TEMPLATES — 2026 v1.0

AI Audit Report — 5-section Template per Artifact

Mandatory appendix for every AI-assisted homework (HW#01–HW#06, and Seminar).

Adapted from Med Kharbach, PhD (2026) — AI Use Policy Templates for Higher Education. CC BY-NC-SA 4.0.  
This adaptation is prepared for FIT@HCMUS – CS423 / CSC15003 Software Testing course.

1. Student Information

| Field                               | Value                                                               |
|-------------------------------------|---------------------------------------------------------------------|
| Student name (printed):             | Cao Trần Bá Đạt                                                     |
| Student ID:                         | 23127168                                                            |
| Class / Cohort:                     | 23KTPM1                                                             |
| Assignment ID (e.g., HW#00, HW#02): | HW#03                                                               |
| Assignment date:                    | 27/07/2026                                                          |
| AI tool(s) used:                    | Gemini                                                              |
| AI tool(s) used:                    | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

2. Instructions (read before filling)

- Add one row per AI-generated artifact (test case, script, checklist, OpenAPI spec, JMeter plan, etc.).
- Paste the verbatim prompt — DO NOT paraphrase.
- Paste the verbatim AI output (or include a labelled screenshot in the report).
- Tag the verdict: VALID / INVALID / INCOMPLETE.
- Reasoning must cite a course slide, ISTQB section, or technical RFC.
- Show the corrected artifact with the change highlighted.
- Sample rows are in italic — replace them before submission.

3. Audit Table — one row per artifact

| (1) Prompt + Tool                                | (2) AI Output                                                           | (3) Verdict | (4) Reasoning (ISTQB)                              | (5) Student Fix         |

4. Summary of AI Accuracy

| Metric                               | Count | Percentage |
|--------------------------------------|-------|------------|
| Total AI-generated artifacts audited | 1     |            |
| VALID (correct, accepted as-is)      | 0     | 0%         |
| INVALID (wrong; rejected)            | 0     | 0%         |
| INCOMPLETE (acceptable after edits)  | 1     | 100%       |

5. Conclusion — When should AI be used (or not)?

Overall, Claude did a surprisingly good job with the first checklist, and I’d say good prompt engineering was the main reason why. By clearly laying out what we needed, the AI was able to get on the right track pretty quickly. That said, you can't expect AI to catch everything. With so many UI requirements to cover, a few items slipped through the cracks, so we still had to jump in and tweak things. Still, it saved us tons of time, and I'll for sure re-use this prompting style for upcoming tasks.

6. Mandatory Disclosure

The GUI checklist was initially generated by Claude; I reviewed and modified the checklist, added item GUI-049; the screens selection rationale, the checklist execution, the cross-browser execution, the bug report, the bug finding logs and the test summary was written entirely by me. The detailed AI Audit Report is attached as Appendix A. I confirm I did not use AI to generate any artifact listed in the prohibited category.
